

SUJOY KAR

Front-End Developer

Bellary, India 583123 | +91 8073054288 | sujoy0308@gmail.com | github.com/GigaVolt3 | linkedin.com/in/sujoy-kar-185588295

SUMMARY

Front-end developer and 4th-year Information Science & Engineering student who ships production systems, not tutorials. I architect and solely maintain MoonStomper — a Discord bot, web dashboard, and wiki platform (~32,000 lines of code) supporting 500+ guild capacity with an engineered 99.5-99.9% uptime target, an 8-model cost-aware LLM routing engine, and automated failover — run daily for a live gaming community. Comfortable across the stack in JavaScript/Node.js, REST APIs, and SQLite/Turso, and I use AI coding tools (Claude Code, ChatGPT, Gemini CLI) daily to move faster without skipping the details.

EDUCATION

Bachelor of Technology, Information Science & Engineering Expected 2027

GM University, Davangere, Karnataka · 4th Year Undergraduate

Relevant coursework: Web Development, Data Structures & Algorithms, Database Management Systems, Object-Oriented Programming, Computer Networks, Software Engineering

TECHNICAL SKILLS

Front-End: HTML5, CSS3, JavaScript (ES6+), React.js, Responsive Web Design, DOM Manipulation, Cross-Browser Compatibility, Performance Optimization

Back-End & Data: Node.js (v22, ESM), Express 5, Python, C, SQL, SQLite, Turso (libSQL), REST API Design & Integration, WebSockets

AI/LLM Engineering: Multi-model cost/latency-aware routing (8-model cascade, 5 complexity tiers), token/prompt budget management, semantic + keyword memory retrieval, audio transcription (Whisper), image generation pipelines

Security & Auth: JWT (HS256), OAuth2, AES-256-GCM encryption, role-based access control

Tools & Infrastructure: Git & GitHub, VS Code, ESLint, npm, PM2 (multi-process, auto-restart, memory-capped), Browser DevTools, CLI Workflows

AI-Assisted Development: Claude Code, ChatGPT, Gemini CLI — used daily for debugging, refactoring, and code review

PROJECTS

MoonStomper: Discord Bot, Web Dashboard & Wiki | *Node.js, Express, WebSockets, SQLite/Turso, REST APIs*

Docs & architecture: github.com/GigaVolt3/MoonStomper-readme | *Live:* moonstomper.wisp.uno

- Architected and solely maintain a 3-service platform (bot, dashboard, wiki) spanning ~32,000 lines of code, supporting 500+ guild capacity with a 99.5-99.9% engineered uptime target via PM2 process management and heartbeat-based failover (<90s detection).
- Built a cost- and latency-aware LLM routing engine cascading across 8 models with 5 complexity tiers and 6 routing modes, sustaining 150-300 requests/minute across pooled API keys within per-model rate limits.
- Designed a WebSocket-synced admin dashboard (80+ Express API routes) with JWT/OAuth2 authentication and live log streaming, so config changes on the dashboard propagate to Discord without a bot restart.
- Implemented AES-256-GCM encryption for stored API keys and cross-service sync payloads, with a 3-tier role hierarchy (owner/admin/user) for access control.
- Shipped 35 slash commands and 30+ interactive component handlers (buttons/selects/modals), powering a turn-based combat and progression system across 7 character realms and 3 raid encounters.
- Built a component-based wiki (5 permission roles, version history) that replaced one-off HTML pages, substantially simplifying the mobile layout rework.

Guild OCR Analyzer | *Python, Flask, EasyOCR, OpenCV, GPU-Accelerated*

- Built a computer-vision tool that reads a game's screen output directly and extracts structured data from the UI, since the game exposes no official API.
- Used OpenCV to preprocess each frame before EasyOCR text extraction, handling noisy screenshots reliably across different resolutions.
- Ran the pipeline on GPU to keep pace with real-time screen capture instead of falling behind.
- Served extracted data via Flask, replacing a manual tracking process previously done by hand.
- Solo build end-to-end: capture, preprocessing, OCR, and data serving.

ADDITIONAL STRENGTHS

Working Knowledge: Version Control Workflows, PM2 Process Management, Basic Deployment Concepts, Software Development Lifecycle (SDLC)
